

ARE YOU READY FOR GHS?

Approved printers for chemical GHS labeling

New GHS regulations, taking effect from June 1st 2015, mean that it is potentially a lot more difficult and inefficient to use thermal transfer monochrome printers to create GHS-compliant labels. ColorWorks C831, ColorWorks C7500 and ColorWorks C3500 use pigment inks which combined with the PE Matte label media are designed to print fully BS5609 certified labels.

Replace your old thermal transfer technology printers now with the Epson ColorWorks printers and create full-colour, on-demand, GHS compliant labels.
